Brainboxes adds LPT port to PCI Express cards
 [Go to company's web site](#)

July 8, 2009 - Brainboxes added the PX-157 Low Profile LPT Port, PX-146 Standard Height LPT Port and PX-475 Standard Height LPT +1 RS232 Port. As LPT ports are no longer built into PCs these cards will allow printer connectivity used in many industrial applications.

Few of the latest PCI Express PCs come with the long established LPT printer port. These can now be added using Brainboxes products, the cards provide fully bi-directional Standard Printer Ports (SPP) allowing complete backwards compatibility with a wide range of peripherals.

The full PCI Express range comprises Standard Height and Low Profile versions of 1, 2, 3, 4 & 8 Port variants in RS232 and 1, 2 & 4 Port RS422/485, Opto isolated versions also available. Cards are supplied with an installation CD including manual, Microsoft signed drivers & utilities. Brainboxes is a Microsoft Certified Gold Partner and these cards are compatible with 32 bit and 64 bit editions of Windows Server 2008, Vista, XP, Server 2003 and 2000. This range also comes with Brainboxes' Serial Solutions software.
