USB to serial PC adaptor runs under Vista or XP

by Richard Wilson
Friday 04 September 2009 05:36

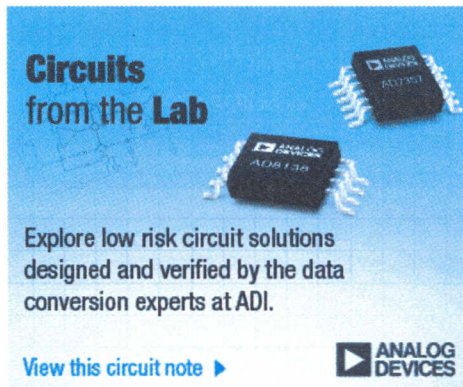

Brainboxes has introduced a range of USB to serial devices to provide a serial port extension suitable for office and laboratory environments.

The first devices to be released in this range are US-101 - 1 port RS232 and US-324 - 1 port RS422/485.

The 1 port RS232 and 1 port RS422/485 products support data transfer rates up to 921,600 baud coupled with 1Mbit/s line drivers.

The supplier packages the products with its Boost Software driver.

They are compatible with 32 bit and 64 bit editions of Windows Server 2008, Vista, XP, Server 2003 and 2000.

Circuits from the Lab

Explore low risk circuit solutions designed and verified by the data conversion experts at ADI.
